Tested OK on KG-UVD1P(B1) too!

The cable needed is the same as the one used to program channels with the software from Wouxun. The unit is generally provided as a pack when buying recent Wouxun units, e.g on EBay. Anyway, it's really cheap.

It's composed with an USB/serial adapter from Prolific (PL-2303). Some users with a regular COM port can also use a home made adapter as the one attached here.

programming cable for KG-UVD1/P
